## Flowering Plants. Eudicots: Santalales, Balanophorales (The Families and Genera of Vascular Plants)

Job Kuijt, Bertel Hansen

In the present volume taxonomic treatments including descriptions of and keys to the families and genera for the orders Santalales and Balanophorales are offered, the former group here comprising 12 families with 162 genera and about 2100 species, and the latter with the single family Balanophoraceae composed of 16 genera and about 42 species. The contentious family classification of Santalales has been thoroughly revised against the background of previous classifications as well as available structural and molecular evidence, and also the classification of Balanophoraceae has been carefully updated.

Santalales are predominantly hemiparasites connected with either the branches or the roots of other green land plants, whereas Balanophoraceae are holoparasites that form terrestrial tubers attached to the roots of woody hosts. In both orders, parasitism has led to considerable reductions of the vegetative and reproductive organs and detailed descriptions are given on the initiation of ramal and terrestrial parasitism in Santalales and the haustorial connection and tissue continuity between host and parasite in both groups. The dramatic reduction of the vegetative body in Balanophoraceae, which may lack all vegetative organs typically found in green land plants, has promoted studies in the field of developmental morphology. Thus, the volume not only provides an overview of the diversity of the plant groups treated therein, but also points to the interesting biological peculiarities that have evolved in connection with their singular lifestyle.

### **From reader reviews:**

#### **Katherine Sherrer:**

What do you concentrate on book? It is just for students since they are still students or the item for all people in the world, what the best subject for that? Just you can be answered for that issue above. Every person has distinct personality and hobby for every other. Don't to be pressured someone or something that they don't want do that. You must know how great in addition to important the book Flowering Plants. Eudicots: Santalales, Balanophorales (The Families and Genera of Vascular Plants). All type of book would you see on many options. You can look for the internet sources or other social media.

#### **Patricia Bush:**

Reading a guide can be one of a lot of exercise that everyone in the world adores. Do you like reading book therefore. There are a lot of reasons why people enjoyed. First reading a publication will give you a lot of new details. When you read a e-book you will get new information mainly because book is one of a number of ways to share the information or maybe their idea. Second, reading through a book will make anyone more imaginative. When you studying a book especially hype book the author will bring you to definitely imagine the story how the people do it anything. Third, you could share your knowledge to other individuals. When you read this Flowering Plants. Eudicots: Santalales, Balanophorales (The Families and Genera of Vascular Plants), you could tells your family, friends and also soon about yours guide. Your knowledge can inspire different ones, make them reading a publication.

#### **Aubrey Smith:**

Spent a free time and energy to be fun activity to perform! A lot of people spent their free time with their family, or all their friends. Usually they performing activity like watching television, likely to beach, or picnic within the park. They actually doing same task every week. Do you feel it? Do you wish to something different to fill your free time/ holiday? Could be reading a book is usually option to fill your cost-free time/ holiday. The first thing that you ask may be what kinds of reserve that you should read. If you want to try out look for book, may be the guide untitled Flowering Plants. Eudicots: Santalales, Balanophorales (The Families and Genera of Vascular Plants) can be great book to read. May be it may be best activity to you.

#### **Carolyn Berndt:**

The book untitled Flowering Plants. Eudicots: Santalales, Balanophorales (The Families and Genera of Vascular Plants) contain a lot of information on the idea. The writer explains your girlfriend idea with easy approach. The language is very easy to understand all the people, so do certainly not worry, you can easy to read the idea. The book was written by famous author. The author will bring you in the new era of literary works. It is possible to read this book because you can please read on your smart phone, or model, so you can read the book within anywhere and anytime. In a situation you wish to purchase the e-book, you can open up their official web-site and also order it. Have a nice go through.
