## **Unseating the Big Bang: A New Theory of the Origin and Ultimate Fate of the Cosmos** Nicholas Brackney

The Big Bang Theory is the most widely accepted scientific theory of the origin of our universe. It states that, at some point in time billions of years ago, the universe suddenly came into existence as a singularity, or infinitely dense point in space, that exploded into what we know today.

There are a number of problems arising from this theory, the answers to which are usually either "We don't yet know how that fits into the theory," or "It's complicated -- you would be forgiven for not understanding." These problems are holes in the theory that only cast more doubt on it.

The Ejection Theory is a simple, elegant theory of the origin and ultimate fate of the cosmos that is not incomprehensible to the general public. Nothing regarding the formation of atoms, stars, and galaxies after the Big Bang is affected. It is only the theory of the actual creation that is called into question. The Big Bang did not happen -- the Ejection did. How the cosmos, our known universe, will end is also explained by the Ejection Theory. A paradigm shift is required for us to continue forward in the field of cosmology.

Problems with the Big Bang Theory that are solved by the Ejection Theory include:

1. Why did inflation occur shortly after the creation, why is the universe expanding at an accelerating rate, and what is dark energy?
2. Why is the expansion of the universe accelerating in a particular direction? (Hint: Anti-gravity and the cosmological constant are both wrong answers)
3. How can a singularity (an infinitely dense point of matter/energy) exist in real life, as opposed to an abstract mathematical concept?
4. What came before our universe suddenly came into existence?
5. Doesn't the universe suddenly coming into existence violate the Law of Conservation of Mass?

There are also several questions that are not directly addressed by, but are related to the Big Bang Theory, such as:

6. How will our universe end?
7. What is beyond our universe?
8. Is there a multiverse, or are there other universes?
9. Why does our universe seem so perfectly "tuned" to be capable of supporting matter and life?

The Ejection Theory answers every one of these questions completely, in a simple, elegant solution that is understandable to anyone. Even if you know nothing about the Big Bang Theory, this will make perfect sense to you. The more you already know on the subject, the more convinced you will be. All the pieces fit. The breakthrough scientists have been searching for is finally here.

### **From reader reviews:**

#### **Irma Hughes:**

Do you certainly one of people who can't read pleasurable if the sentence chained within the straightway, hold on guys this aren't like that. This Unseating the Big Bang: A New Theory of the Origin and Ultimate Fate of the Cosmos book is readable by means of you who hate the straight word style. You will find the data here are arrange for enjoyable reading experience without leaving even decrease the knowledge that want to supply to you. The writer associated with Unseating the Big Bang: A New Theory of the Origin and Ultimate Fate of the Cosmos content conveys prospect easily to understand by many people. The printed and e-book are not different in the written content but it just different such as it. So , do you nevertheless thinking Unseating the Big Bang: A New Theory of the Origin and Ultimate Fate of the Cosmos is not loveable to be your top listing reading book?

#### **Ned Aguayo:**

Would you one of the book lovers? If so, do you ever feeling doubt if you are in the book store? Try and pick one book that you never know the inside because don't assess book by its cover may doesn't work is difficult job because you are afraid that the inside maybe not because fantastic as in the outside seem likes. Maybe you answer is usually Unseating the Big Bang: A New Theory of the Origin and Ultimate Fate of the Cosmos why because the amazing cover that make you consider regarding the content will not disappoint you actually. The inside or content will be fantastic as the outside or perhaps cover. Your reading sixth sense will directly make suggestions to pick up this book.

#### **Helen Massey:**

As a pupil exactly feel bored to help reading. If their teacher questioned them to go to the library in order to make summary for some publication, they are complained. Just little students that has reading's spirit or real their hobby. They just do what the teacher want, like asked to the library. They go to generally there but nothing reading seriously. Any students feel that reading through is not important, boring in addition to can't see colorful photographs on there. Yeah, it is for being complicated. Book is very important for you. As we know that on this age, many ways to get whatever we would like. Likewise word says, many ways to reach Chinese's country. Therefore this Unseating the Big Bang: A New Theory of the Origin and Ultimate Fate of the Cosmos can make you truly feel more interested to read.

#### **Jackie Lund:**

Some individuals said that they feel bored when they reading a book. They are directly felt the item when they get a half portions of the book. You can choose typically the book Unseating the Big Bang: A New Theory of the Origin and Ultimate Fate of the Cosmos to make your personal reading is interesting. Your skill of reading skill is developing when you like reading. Try to choose very simple book to make you enjoy to learn it and mingle the sensation about book and reading especially. It is to be initially opinion for you to

like to available a book and study it. Beside that the book Unseating the Big Bang: A New Theory of the Origin and Ultimate Fate of the Cosmos can to be your brand-new friend when you're feel alone and confuse in what must you're doing of these time.
